Single Supply RS-232 Transceivers

UM3232BEEUE ***TSSOP16***
UM3232BEESE ***SOP16***
UM3232BEEAE ***SSOP16***

General Description

The UM3232B is 3.3V powered RS-232 transceiver intended for portable or hand-held applications. The UM3232B has two drivers/two receivers. The device features low power consumption, high data-rate capability and enhanced ESD protection. The ESD rating of all transmitter outputs and receiver inputs is ±15kV for human body mode, and ±15kV for and IEC61000-4-2 air discharge methods, and ±8kV for IEC61000-4-2 contact discharge methods. The logic I/O pins are protected to ±2kV for human body mode.
Small footprint, low profile package and the use of small 0.1μF capacitors ensure board space savings as well. Data rates greater than 500kbps are guaranteed at worst case load conditions. This family is fully compatible with 3.3V-only systems, mixed 3.3V and 5.0V systems and 5.0V-only systems.

Applications

- Industrial Automation Equipments
- Battery-Powered Equipments
- Hand-Held Equipments
- POS Terminals

Features

- Meets True EIA/TIA-232-F Standards from a +3.0V to +5.5V Power Supply
- Enhanced ESD Specifications:
  ±15kV Human Body Mode
  ±15kV IEC61000-4-2 Air Discharge Mode
  ±8kV IEC61000-4-2 Contact Discharge Mode
- 500kbps Minimum Transmission Rate
- Guaranteed 30V/μs Max Slew Rate
- Latch-Up Performance Exceeds 200mA

UM3232BEESE	-40℃ to +85℃	UM3232EESE	SOP16	2500pcs/13 Inch Tape & Reel
UM3232BEEAE	-40℃ to +85℃	UM3232EEAE	SSOP16	2000pcs/13 Inch Tape & Reel

Absolute Maximum Ratings (Note 1)

Symbol	Parameter		Value	Unit
V_{CC}	Supply Voltage on V_{CC}		-0.3 to +6	V
V_+	Voltage on V_+		(V_{CC}-0.3) to +7.5	V
V_-	Voltage on V_-		-7.5 to +0.3	V
T_IN	Voltage on T_IN		-0.3 to (V_{CC}+0.3)	V
R_IN	Voltage on R_IN		±25	V
T_OUT	Voltage on T_OUT		(V_--0.3) to (V_++0.3)	V
R_OUT	Voltage on R_OUT		-0.3 to (V_{CC}+0.3)	V
	Short-Circuit Duration, T_OUT		Continuous	
P_D	Continuous Power Dissipation at T_A=70℃	TSSOP16	754	mW
		SOP16	696	
		SSOP16	775	
T_A	Operating Temperature Range		-40 to +85	℃
T_J	Junction Temperature Range		-40 to +125	℃
T_{STG}	Storage Temperature Range		-65 to +150	℃
T_L	Lead Temperature for Soldering 10 Seconds		+260	℃

Note 1: Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Electrical Characteristics

(V_{CC}=+3.0V to +5.5V, C1- C4=0.1μF, T_A=T_{MIN} to T_{MAX}, unless otherwise noted. Typical values are at T_A=25℃)

Detailed Description

Dual Charge-Pump Voltage Converter

The UM3232B's internal power supply consists of a regulated dual charge pump and provides output the maxim voltages of +7V (doubling charge pump) and -7V (inverting charge pump) over the +3.0V to +5.5V V_{CC} range. The charge pump operates in discontinuous mode; if the output voltages are less than 7V, the charge pump is enabled, and if the output voltages exceed 7V, the charge pump is disabled. The charge pumps require only four small, external 0.1μF capacitors for the voltage doubler and inverter functions (see Figure 2).

RS-232 Transmitters

The transmitters are inverting level translators that translate TTL/CMOS inputs to EIA/TIA-232 output levels. All UM3232B transmitters guarantee a 500kbps data rate for full load conditions (3kΩ and 1000pF). Transmitters can be paralleled to drive multiple receivers. When T_IN is not driven, UM3232B's T_IN logic level is on hold.

RS-232 Receivers

The receivers convert RS-232 signals to CMOS output levels and accept inputs up to ±20V while presenting the required 3kΩ to 7kΩ input impedance.

±15kV ESD Protection

All pins on UM3232B devices include ESD protection structures, but the family incorporates advanced structures which allow the RS-232 pins (transmitter outputs and receiver inputs) to survive ESD events up to ±15kV. The RS-232 pins are particularly vulnerable to ESD damage because they are typically connected to an exposed port on the exterior of the finished product. The ESD structures withstand high ESD in all states: normal operation and powered down. After an ESD event, circuits keep working without latch up. ESD protection can be tested in various ways; the transmitter outputs and receiver inputs are characterized for protection to the following limits: ±15kV using the Human Body Model, ±8kV using the Contact Discharge method specified in IEC61000-4-2, ±15kV using the Air-Gap Discharge method specified in IEC61000-4-2. The logic pins are characterized for protection to the following limit: ±2kV using the Human Body Model.

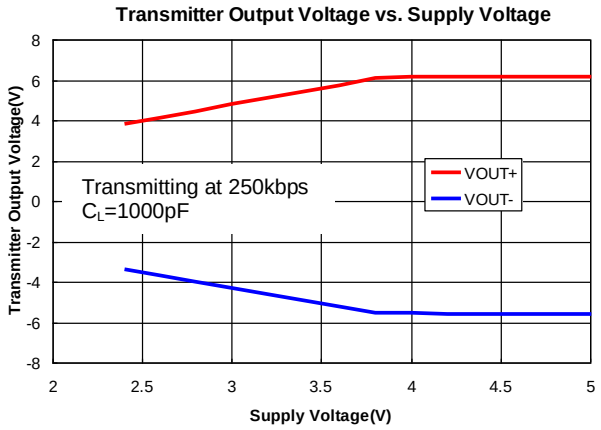
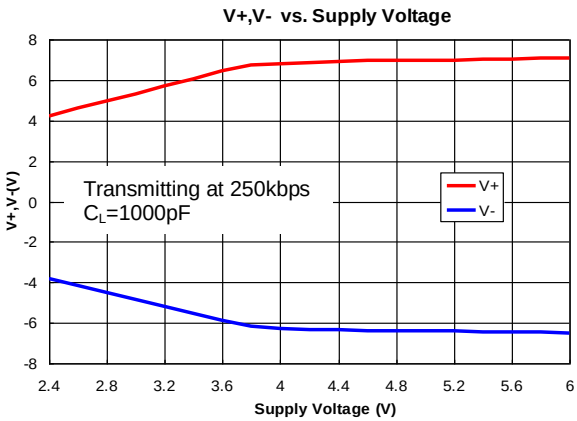
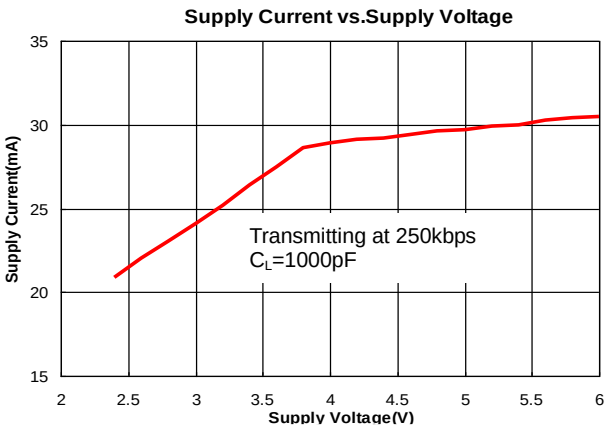
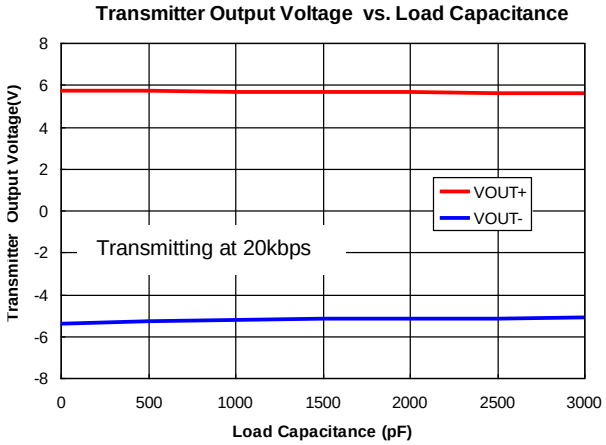
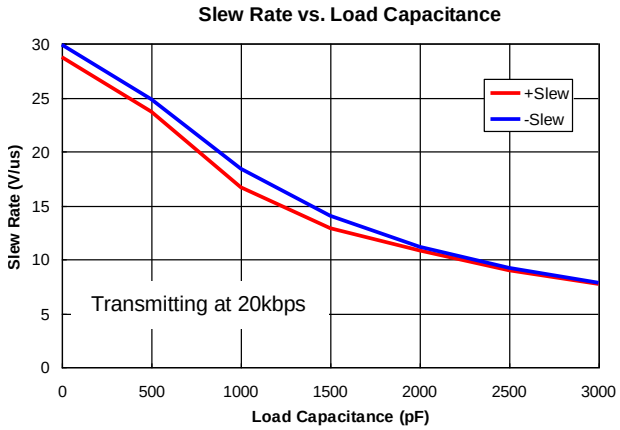
(V_{CC}=+3.3V, 250kbps data rate, 0.1μF capacitors, all transmitters loaded with 3kΩ and C_L, T_A=25℃, unless otherwise noted.)

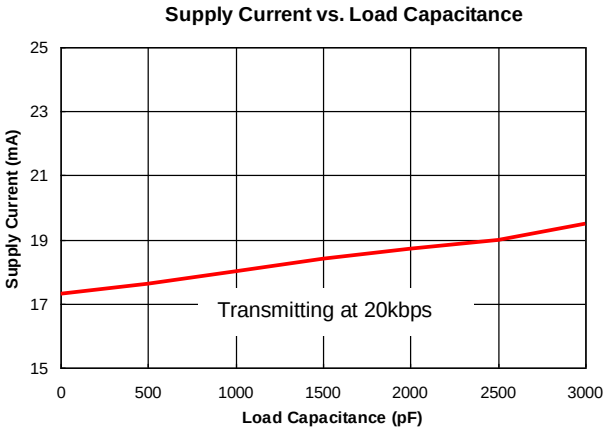












Applications Information

Capacitor Selection

The capacitor type used for C1–C4 is not critical for proper operation; polarized or non-polarized capacitors can be used. The charge pump requires 0.1μF capacitors for 3.3V operation. Increasing the capacitor values (e.g. by a factor of 2) reduces ripples on the transmitter outputs and slightly reduces power consumption. C2, C3 and C4 can be increased without changing C1's value. When using the minimum required capacitor values, make sure the capacitor value does not degrade excessively with temperature. If in doubt, use capacitors with a larger nominal value. The capacitor's equivalent series resistance (ESR), which usually rises at low temperatures, influences the amount of ripples on V+ and V- output voltages.
The following table shows some recommended minimum required pump capacitor values for different input voltage ranges.

Minimum Required Pump Capacitor Value	
Input Voltage V_{CC}	**Charge Pump Capacitor Value for UM3232B**
3.0V to 3.6V	C1–C4=0.1μF
3.0V to 5.5V	C1–C4=0.47μF

Power Supply Decoupling

In most circumstances, a 0.1μF V_{CC} bypass capacitor is adequate. In applications sensitive to power-supply noise, use a capacitor of the same value as charge pump capacitor C1. Connect bypass capacitors to the IC as close as possible.

Interconnection with 3V and 5V Logic

The UM3232B can directly interface with various 3V and 5V logic families, including ACT and HCT CMOS.

GREEN COMPLIANCE

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.
All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
