

Multi-line ESD/EMI Protection for Color LCD Interfaces

UM4601 DFN8 2.0×2.0

UM4611 DFN8 1.7×1.3

UM8601 DFN16 4.0×1.6

UM8611 DFN16 3.3×1.3

General Description

The UM4601/UM4611/UM8601/UM8611 is a (L-C) low pass filter array with integrated TVS diodes. It is designed to suppress unwanted EMI signals and provide electrostatic discharge (ESD) protection in portable electronic equipment. This device utilizes solid-state silicon-avalanche technology for superior clamping performance and DC electrical characteristics. They have been optimized for protection of color LCD and camera lines in cellular phones and other portable electronics.

The device consists of identical circuits comprised of TVS diodes for ESD protection, and an inductor - capacitor network for EMI filtering. A typical inductor value of 17nH and a capacitor value of 15pF are used to achieve 24dB minimum attenuation from 800MHz to 2.7GHz. The TVS diodes provide effective suppression of ESD voltages in excess of ±15kV (air discharge) and ±8kV (contact discharge) per IEC 61000-4-2, level 4.

The UM4601 is in a RoHS compliant DFN8 2.0×2.0 package, the UM4611 is in a RoHS compliant DFN8 1.7×1.3 package, the UM8601 is in a RoHS compliant DFN16 4.0×1.6 package and the UM8611 is in a RoHS compliant DFN16 3.3×1.3 package. The leads are finished with lead-free. The small package makes it ideal for use in portable electronics such as cell phones, digital still cameras, and PDAs.

Applications

- Color LCD Protection
- Cell Phone CCD Camera Lines
- Clamshell Cell Phones

Features

- Bidirectional EMI Filter with Integrated TVS for ESD Protection
- ESD Protection to IEC 61000-4-2 (ESD) Level 4, ±15kV (Air), ±8kV (Contact)
- Filter Performance: 24dB Minimum Attenuation from 800MHz to 2.7GHz
- TVS Working Voltage: 5V
- Inductor: 17nH (Typical)
- Capacitors: 15pF (Typical at $V_R=2.5V$)
- Protection and Filtering for Multi Lines
UM4601/4611: Four Lines
UM8601/8611: Eight Lines
- Solid-State Technology

Typical Insertion Loss

Analog Crosstalk

Applications Information

Insertion Loss

Insertion Loss (IL) is used to describe the transmission coefficient between two points in a circuit often described in terms of dB. When examining S parameters, S₂₁ is often described as insertion loss. Insertion Loss and S₂₁ will be used interchangeably from here on out. The insertion loss of a circuit with V_{OUT} and V_{IN} would be expressed as

$$IL=S_{21}(dB)=20\log(V_{OUT}/V_{IN})$$

The setup for measuring insertion loss in a 50Ω system is shown in the figure below. It will be analyzed in a 50Ω environment, so the source impedance and load impedance is 50Ω. The transfer functions then can be analyzed in terms of insertion loss (S₂₁).

**Test Conditions: Source Impedance=50Ω
Load Impedance=50Ω
Input Power=0dBm**

Cut Off Frequency

Cut off Frequency is the frequency at which the signal strength is 3.0dB less than it is Pass Band. 3.0dB of attenuation equates to half the original signal power. The Pass Band is the range of frequencies that are allowed to “pass” through a filter with minimal attenuation. For our purposes it starts from DC and ends at the cut off frequency.

Device Connection

The UM4601/UM4611/UM8601/UM8611 is comprised of identical circuits consisting of a low pass filter for EMI suppression and dual TVS diodes for ESD protection. The device is in an 8-pin DFN and 16-pin DFN package. Electrical connection is made to all the pins located at the bottom of the device. A center tab serves as the ground connection. The device has a flow through design for easy layout. All path lengths should be kept as short as possible to minimize the effects of parasitic inductance in the board traces.

Ground Connection Recommendation

Parasitic inductance (L) present in the board layout will affect the filtering performance of the device. As frequency (f) increases, the effect of the inductance becomes more dominant. This effect is given by Equation 1.

Pin Identification & Configuration

UM4601/UM4611

Pin	Identification
1-4	Input Lines
5-8	Output Lines
Center Tab	Ground

Equation 1: The Impedance of an Inductor at Frequency XLF

$$X_{LF}(L, f) = 2 \times \pi \times f \times L$$

Where:

L = Inductance (H)

f = Frequency (Hz)

Pin Identification & Configuration

UM8601/UM8611

Pin	Identification
1-8	Input Lines
9-16	Output Lines
Center Tab	Ground

Equation 1: The Impedance of an Inductor at Frequency XLF

$$X_{LF}(L, f) = 2 \times \pi \times f \times L$$

Where:

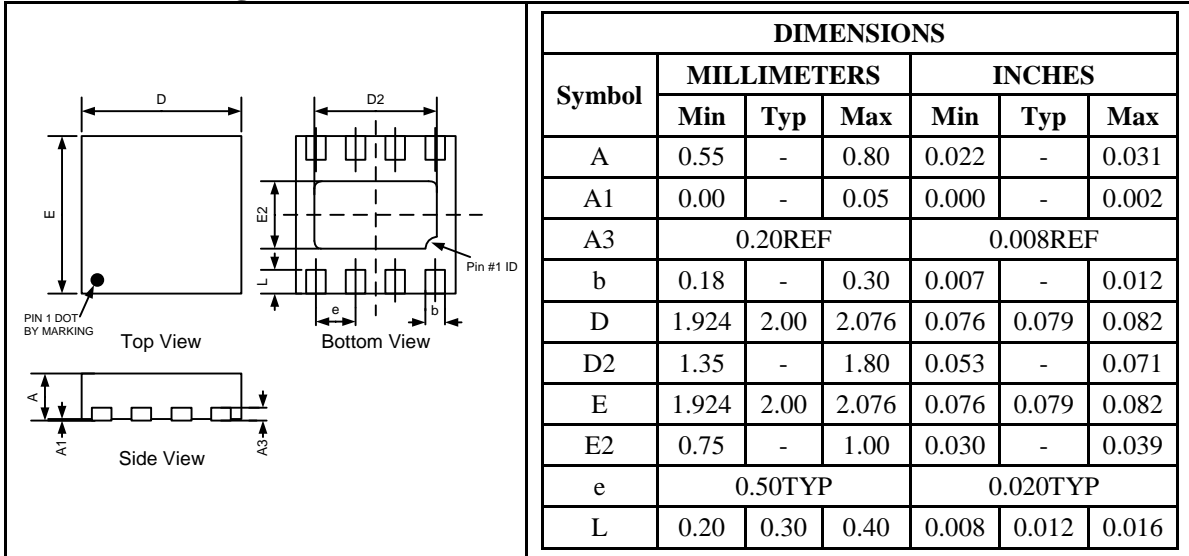

L = Parasitic Inductance in the PCB (H)

f = Frequency (Hz)

GREEN COMPLIANCE

Union Semiconductor is committed to environmental excellence in all aspects of its operations including meeting or exceeding regulatory requirements with respect to the use of hazardous substances. Numerous successful programs have been implemented to reduce the use of hazardous substances and/or emissions.

All Union components are compliant with the RoHS directive, which helps to support customers in their compliance with environmental directives. For more green compliance information, please visit:
